Bard Manufacturing is First Wall Mount SPVU manufacturer to Offer Building Information Modeling (BIM) on Autodesk Seek

Helping Architects and Engineers Eliminate the Guesswork from Project Design

Bryan, Ohio (October 2014) Bard Manufacturing, Inc.—a family owned and leading provider of SPVU climate control solutions for over 100 years—will be making its product lines available through the Autodesk Seek web service. Autodesk Seek provides access to BIM models, drawings, and product specifications for more than 66,000 commercial and residential building products from nearly 1,000 manufacturers.

With Seek, design professionals can easily search, preview, and download high quality Bard product information and design files directly from desktop applications that support a BIM process workflow, such as AutoCAD or Autodesk Revit. The Bard product information and design files that are available for download consist of 3D models, 2D drawings, visual images, and product specifications and literature—including technical guides and performance statistics.

“Software supporting a BIM process offer incredibly useful tools for design professionals, and they continue to grow in popularity.” said Paul Quigley, Vice President of Sales and Marketing. “Making Bard product literature, specifications, and visual models available on Autodesk Seek benefits both Bard and BIM users alike by helping architects and engineers identify the optimal product for each project with more confidence and in less time.”

Seek provides design professionals and builders with a single, unified search experience that simplifies and eliminates costly guesswork from the previously laborious process of searching, evaluating, and selecting the product that best fits the specifications for each specific project. Pinpointing the ideal product in the early stages of the design process helps identify potential conflict in the project’s later stages, which allows for the proper adjustments to be made before beginning actual development. Design professionals save both time and money thanks to this enhanced preparation; and now with Seek, Bard product specifications, 3D models, and necessary literature will only be a click away—every step of the way.
