INSTALLATION & OPERATING INSTRUCTIONS

ECONOMIZERS WITH EXHAUST for STANDARD APPLICATIONS

Model
ECONWMS-E2B*, -E3B* & -E5B*
(Factory Installed Vent Option “S”)
with ENTHALPY CONTROL

For Use with 2-1/2 through 6 Ton Wall Mount Air Conditioners and Heat Pumps

NOTE: These instructions are written to cover field-installed economizers, but are also included with factory installed economizers. For factory installed economizers, all portions addressing “installation” are for reference only.

GENERAL INFORMATION

The economizer should only be installed by a trained heating and air conditioning technician. These instructions serve as a guide to the technician installing an economizer package, not as a step-by-step procedure with which the mechanically inclined owner can install the package.

The economizer housing is shipped in one carton, which contains the electrical harness, miscellaneous hardware and installation instructions.

The economizer installation requires the use of a 2-stage or 3-stage cooling thermostat (if there is not one already present) and requisite amounts of low voltage conductor wire for the application. A single stage compressor will require a 2-stage cooling thermostat; a 2-stage compressor will require a 3-stage cooling thermostat. The number of low-voltage control conductors will vary depending upon application.

If using a master controller, the MC4000 controller is designed specifically to control two (2) redundant wall mount units equipped with economizers.

Any wall mount unit equipped with an economizer must also have a factory/field installed low ambient control. Please refer to appropriate model/year Specification Sheet for requisite field installed low ambient control kit part numbers.

UNPACKING

Upon receipt of the equipment, be sure to compare the model number found on the shipping label with the accessory identification information on the orders and shipping document to verify that the correct accessory has been shipped.

Inspect the carton housing of each economizer assembly as it is received, and before signing the freight bill – verify that all items have been received and there is no visible damage. Note any shortages or damage on all copies of the freight bill. The receiving party must contact the last carrier immediately, preferably in writing, requesting inspection by the carrier’s agent. Concealed damage not discovered until after loading must be reported to the carrier within 15 days of its receipt.

NOTE: Factory installed Telcom economizers have the air intake hood shipped knocked-down. See “Intake Air Hood Assembly” section for shipping location of hood parts and follow the assembly instructions.

DESCRIPTION

The ECONWMS-E5BX economizer is designed to be used with wall mount series air conditioners and heat pumps, shown in Table 1, equipped with low ambient controls. They are electromechanical economizer systems designed to provide “free” cooling where the outdoor air temperature/enthalpy is cool enough to provide the needed cooling without running the compressor, or in addition to the compressor. When cooling is required, the system automatically takes advantage of cold outdoor air when available and uses it for first stage cooling. This then reduces the need to run the air conditioning compressor providing lower operating costs and increasing the service life of the equipment. If the outdoor air temperature/enthalpy is too warm to be sufficient for cooling, the dry bulb outdoor air temperature sensor detects the condition and automatically closes the outdoor air intake/exhaust damper, opens the return air damper, and switches to compressor-only operation. Without attention from the end user, the economizer assembly is meant to automatically achieve maximum savings while ensuring appropriately cool space temperatures. The economizer utilizes a fully-modulating damper actuator, which will control intake/exhaust in order to obtain and maintain a factory-set minimum supply air temperature. As a secondary feature, the economizer assembly can be programmed for a minimum ventilation based on an “occupied” (or otherwise dedicated) 24V signal to satisfy fresh air ventilation on populated structures or dilution of internal pollutants.

○ Low ambient control is required w/economizer for low temperature operation.

ECONWMS Series Economizers are not for use with variable capacity ECU models.
INSTALLATION of FIELD INSTALLED ECONOMIZER

BASIC INSTALLATION

1. Unpack the economizer assembly, which includes the integral economizer with attached electrical harness, mixed air sensor, body panels, miscellaneous hardware, and installation instructions.

2. From existing wall mount unit, remove and save Blower Access Panel and Filter Access Panel. Remove and discard the Ventilation Access Panel. Remove and save the existing filter. (See Figure 1.)

3. Remove and discard the exhaust cover plate. (See Figure 1.)

4. Install new condenser exhaust plate with screen over the opening. (See Figure 1A.)

NOTE: If you are installing this economizer assembly into a left-hand access wall mount, please stop here and proceed to specific instruction note on Page 13.

5. In the open cavity between the filter rack and the condenser section, begin to insert the main economizer assembly. Slide the assembly inside, being careful not to tear the existing insulation. Do not completely recess the assembly. (See Figure 2.)

6. Unravel the attached economizer wiring harness and separate the two (2) orange wires connected to a white, two-pin sensor plug. The remainder of the low voltage wires can be routed through the existing wiring grommet located near the bottom of the wall mount electrical control panel. (See Figure 2.)

![Figure 1 Diagram]

CONDENSER COVER PLATE

CONDENSER PARTITION

MIS-2955
7. Pull wires gently through grommet so that low voltage wires protrude underneath wall mount terminal board.

8. Route two (2) orange wires connected to a white two-pin sensor plug along refrigerant lines and behind the filter bracket to terminate at the blower partition. (See Figure 2.)

9. Fully seat economizer assembly to the rear of the wall mount cavity, making sure economizer control panel opposite filler strip is fully recessed into cabinet. (See Figure 2.)

10. Install temperature sensor bracket and mixed air temperature sensor in blower partition. Insert white two-pin sensor into sensor housing. (See Figure 3.)

12. Connect all low voltage leads to terminal board of wall mount unit as required according to installed equipment and controls. Figure 4 shows the basic economizer wiring, and is followed by typical control wiring diagrams for single unit applications. Refer to MC4000 Lead/Lag Controller Instructions Manual 2100-563 for dual unit control connections.
CONTROL WIRING CONNECTION DIAGRAMS

The control wiring diagrams on the following pages represent typical control wiring for single units controlled by individual thermostats. If thermostats other than those referenced are used, the installer must verify output functions accordingly.

For dual unit installation utilizing lead/lag controller systems, complete details are contained in MC4000 Series Lead/Lag Controller Manual 2100-563.

**NOTE:** Since observation of motor/damper operation is difficult after air hood installation, it is recommended the unit be enabled for start-up now. If high voltage power is available and the wall mount unit can be energized, turn to Page 16 for programming and start-up/checkout procedures. If no power is available, or if immediate start-up is not desired, continue with the basic installation process. The air hood assembly can be partially disassembled at a later time for start-up/checkout procedures.
Change model configuration from heat pump to heat/cool, and must be configured for 2 heat/2 cool conventional.

Economizer for YO/D output to be active as first stage cooling.

Factory Jumper Installed.

Must be energized to enable minimum position. NOTE: Economizer Control Default Setting on units with 15 or more kw.

Factory installed jumper. Remove for 2-stage operation on units with 15 or more kw.

Older units may not have Y1 and Y2 connections on 24v terminal block. If not present wire nuts must be used.

MIS-2983 A
Change model configuration from heat pump to heat/cool, and must be configured for C GR 1Y economizer for YO/D output to be active as first stage cooling.

Change "system type", set up function 1, from 5 (2 heat/1 cool heat pump) to 6 (2 heat/2 cool conventional).

Change model configuration from heat pump to heat/cool, and must be configured for economizer for YO/D output to be active as first stage cooling.
FIGURE 6
1-STAGE HEAT PUMP WITH OPTIONAL ELECTRIC HEAT
WITH ECONWM* STYLE ECONOMIZER

Low Voltage Wiring Diagram

Must be energized to enable minimum position. NOTE: Economizer Control Default Setting is 10V (100%). Depending upon application may require setting to lower value.

1 Must be configured for heat pump / multistage/ no economizer/ to enable YO/D output to be active as dehumidification output

2 Factory Jumper Installed.

Must be configured for heat pump / no economizer/to enable YO/D output to be active as dehumidification output

Factory Jumper Installed.

MIS-2995 B
The Schoolroom version economizers utilize an air intake hood to maximize outdoor airflow performance and to be able to introduce this at low intake velocity.

FACTORY INSTALLED ECONOMIZERS
The main economizer assembly is installed in the unit’s ventilation cavity, but the air intake hood is shipped on the back side of the A/C unit.

FIELD INSTALLED ECONOMIZERS
1. Where discarded Vent Option Panel used to be install the WMDK2-* (purchased separately).
2. Attach this hood to the service access panel with screws provided. (See Figure 9.)

LEFT-HAND APPLICATIONS ONLY
1. Before installation into wall mount cavity, rotate economizer 180° so JADE controller will now be adjacent to the wall mount unit control panel. (See Figure 10.)
2. Remove two (2) side angles and block off plate. (See Figure 10.)
3. Remove switch assembly by taking out two (2) screws. Reposition switch assembly and reattach using two (2) screws. (See Figure 10.)
4. Reinstall two (2) side angles in upper position. Reinstall block off plate in lower position. (See Figure 10.)
5. Loosen actuator shaft adaptor clamp from damper blade rod. (See Figure 10.)
6. Remove actuator assembly from economizer. (See Figure 10.)
7. Pull adaptor clamp retainer clip; remove adaptor clamp from actuator assembly and reinstall on the opposite side of the actuator on the “0” position. (See Figure 10.)
8. Reinstall actuator assembly with adaptor clamp facing away from the economizer assembly. (See Figure 10.)
9. Ensure position of the economizer damper is closed, then tighten shaft adaptor clamp. (See Figure 10.)
10. Hood mounting door will use alternate control panel door location. Before installing hood, ensure switch is functioning properly in upper position (activated in closed blade position.)

NOTE: Please resume the basic installation process at Step #4 on Page 4.
JADE™ ECONOMIZER CONTROLLER

W7220 Controller offers unparalleled flexibility and expansion in a dependable and solid electronic platform.

- Multiple economizer applications from one controller.
- Nearly limitless customization of setpoints.
- Internal Checkout menu provides fast performance assessment.
- Alarms menu provides assistance in troubleshooting.

Memory: User defined setpoints remain in non-volatile flash memory regardless of electrical outage duration. Control voltage below 18V may cause erratic performance.
START-UP / CHECKOUT PROCEDURES

From the factory, the JADE™ economizer controller has been preset with “default” values that were predetermined as optimum for school buildings, and these are shown in Tables 2 - 4. However, it is important to review and/or customize these operational values per owner specifications in order to guarantee satisfactory performance. The installing contractor can easily access the JADE™ programming by the integral keypad and LCD display.

There are six (6) basic MENU categories to navigate:

1. STATUS – provides real-time access to sensor input, damper and equipment operation.
2. SETPOINTS – customizable operational parameters.
3. SYSTEM SETUP – customizable application programming.
4. ADVANCED SETUP – further application and operational options.
5. CHECKOUT – instantly activate and verify economizer functions.
6. ALARMS – displays alarms and pinpoints problem areas.

Before being placed in service, the JADE™ economizer controller programming should be reviewed/customized through the following steps:

1. SYSTEM SETUP: from the main screen, press the SCROLL (UP/DOWN) BUTTONS to navigate through the six (6) basic menu items to the SYSTEM SETUP menu.
   - Push the SELECT (ENTER) BUTTON to choose the SYSTEM SETUP menu.
   - Navigate through the multiple levels of SYSTEM SETUP by pushing the SCROLL (UP/DOWN) BUTTONS.
   - To change a specific parameter in the SYSTEM SETUP menu, press the SELECT (ENTER) BUTTON to display its current value. Press the SCROLL (UP/DOWN) BUTTONS to change or increase/decrease value. Press the SELECT (ENTER) BUTTON to save the new customized value — “CHANGE STORED” will be displayed. Press the SELECT (ENTER) BUTTON again to return to current menu parameter.
   - For specific SYSTEM SETUP level information, refer to Table 2.

NOTE: During an extended level of inactivity, the display of the JADE™ economizer controller will begin to automatically scroll through the various levels of the STATUS menu as a screensaver. Each level will stay for approximately 5 seconds before changing to the next level.

2. ADVANCED SETUP: from the main screen, press the SCROLL (UP/DOWN) BUTTONS to navigate through the six (6) basic menu items to the ADVANCED SETUP menu.
   - Push the SELECT (ENTER) BUTTON to choose the ADVANCED SETUP menu.
   - Navigate through the multiple levels of ADVANCED SETUP by pushing the SCROLL (UP/DOWN) BUTTONS.
   - To change a specific parameter in the ADVANCED SETUP menu, press the SELECT (ENTER) BUTTON to display its current value. Press the SCROLL (UP/DOWN) BUTTONS to change or increase/decrease value. Press the SELECT (ENTER) BUTTON to save the new customized value — “CHANGE STORED” will be displayed. Press the SELECT (ENTER) BUTTON again to return to current menu parameter.
   - For specific ADVANCED SETUP level information, refer to Table 3.

**NOTE:** At this point, the economizer assembly should be fully functional and ready for preliminary testing.

### 3. SETPOINTS:
from the main screen, press the **SCROLL (UP/DOWN) BUTTONS** to navigate through the six (6) basic menu items to the **SETPOINTS** menu.

- Push the **SELECT (ENTER) BUTTON** to choose the **SETPOINTS** menu.
- Navigate through the multiple levels of **SETPOINTS** by pushing the **SCROLL (UP/DOWN) BUTTONS**.
- To change a specific parameter in the **SETPOINTS** menu, press the **SELECT (ENTER) BUTTON** to display its current value. Press the **SCROLL (UP/DOWN) BUTTONS** to change or increase/decrease value. Press the **SELECT (ENTER) BUTTON** to save the new customized value — “CHANGE STORED” will be displayed. Press the **SELECT (ENTER) BUTTON** again to return to current menu parameter.
- For specific **SETPOINTS** level information, refer to Table 4.

### 4. CHECKOUT:
from the main screen, press the **SCROLL (UP/DOWN) BUTTONS** to navigate through the six (6) basic menu items to the **CHECKOUT** menu.

- Push the **SELECT (ENTER) BUTTON** to choose the **CHECKOUT** menu.
- Navigate through the multiple levels of **CHECKOUT** by pushing the **SCROLL (UP/DOWN) BUTTONS**.
- To perform a specific test in the **CHECKOUT** menu, press the **SELECT (ENTER) BUTTON** to choose a particular exercise, “RUN?” will appear. Press the **SELECT (ENTER) BUTTON** again to activate this exercise. After a short pause, “IN PROGRESS” will appear as the test activates. “DONE” will display after the test is complete. Press the **MENU UP (EXIT) BUTTON** to end the test and/or turn off the activated relay.
- For specific **CHECKOUT** level information, refer to **Table 5**.

**NOTE:** **CHECKOUT** functions bypass the normal 5-minute delay for compressor protection. Be sure to allow for enough time to pass between tests so the compressor is not damaged from extreme short-cycling.

</tbody>
</table>

**NOTE:** Economist assembly should be ready to put into service. At any point during operation, in economizer mode or idle, real-time information from sensors and integral components can be accessed from the **STATUS** menu.

5. **STATUS:** from the main screen, press the **SCROLL (UP/DOWN) BUTTONS** to navigate through the six (6) basic menu items to the **STATUS** menu.
- Push the **SELECT (ENTER) BUTTON** to choose the **STATUS** menu.
- Navigate through the multiple levels of **STATUS** by pushing the **SCROLL (UP/DOWN) BUTTONS**.
- As the **STATUS** menu simply gives input/output information in real-time, there is no way to change or otherwise alter the displayed criteria. It is simply a window into the operation of the economizer controller.
- For specific **STATUS** level information, refer to Table 6.

**NOTE:** Upon power-up (or after power failure or low voltage condition), the controller will begin a 5-minute time delay before enabling mechanical cooling.

**NOTE:** If there are any potential problems recognized by the economizer controller, it may be registered in the form of an alarm in the **ALARM(S)** menu. If there is a period of inactivity AND there is an alarm registering, the controller will randomly scroll through the **ALARM(S)** menu items as a screensaver.
ENTHALPY SETTINGS

If economizer is enthalpy-based, and was shipped with the temp/humidity sensor, the economizer must be programmed for the specific enthalpy curve boundary desired for “free” outdoor cooling. The available enthalpy boundaries are all subject to specific OA temperature, OA humidity, and OA dew points. If all of the OA conditions are below the specific points outlined in each boundary, the conditions are good to economize and economizer mode is set to “YES”. If some or all the OA conditions are above the specific points outlined in each boundary, the conditions are not good to economize and the economizer mode is set to “NO”.

ALARM(S): from the main screen, press the SCROLL (UP/DOWN) BUTTONS to navigate through the six (6) basic menu items to the ALARM(S) menu.

- Push the SELECT (ENTER) BUTTON to choose the ALARM(S) menu.
- Navigate through the current alarms in ALARM(S) by pushing the SCROLL (UP/DOWN) BUTTONS.
- Once the alarm has been identified, and the cause has been removed (e.g. replaced faulty sensor), the alarm may erase itself. If a manual alarm-erasing is required, it can be cleared from the display by navigating to the desired alarm and pressing the SELECT (ENTER) BUTTON to choose that specific alarm. “ERASE?” will display. Press the SELECT (ENTER) BUTTON again. “ALARM ERASED” will appear. Press the MENU UP (EXIT) BUTTON to complete the action and return to the previous menu.
- For specific ALARM(S) information, refer to Table 7.

### TABLE 7
ALARMS (Examples)

<table>
<thead>
<tr>
<th>Alarm(s)</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>MAT SENS ERR</td>
<td>Malfunctioning mixed air sensor</td>
</tr>
<tr>
<td>OAT SENS ERR</td>
<td>Malfunctioning outdoor air sensor</td>
</tr>
<tr>
<td>ACT STALLED</td>
<td>Actuator cannot reach desired percentage of opening</td>
</tr>
<tr>
<td>SYS ALARM</td>
<td>If AUX is set to SYS in SETPOINTS menu, SYS will display upon any registered alarm</td>
</tr>
</tbody>
</table>

NOTE: This is not a complete list of alarms. Additional alarms will display depending upon the parameter settings and configuration and attached equipment.
ECONOMIZER SEQUENCE OF OPERATION

Condition — Cool / Dry OA Conditions

- 1st Stage Cooling closes and sends signal to JADE™ control. Since the air temperature outside is cooler than the preset DRYBULB SET setting, or is below the ENTH CURVE boundary in the SETPOINTS menu, the actuator will power the economizer damper to "economizer" mode as the indoor blower motor starts. The mixed air sensor senses a mixture of return air and cool outdoor air and modulates opening to achieve preset MAT SET setting in SETPOINTS menu. Compressor operation is inhibited. (See Figure 11.)

- 2nd Stage Cooling closes and sends a signal to JADE™ control, which closes the Y1-O relay to begin mechanical cooling. The economizer damper REMAINS OPEN in tandem operation with the compressor as long as the OA conditions do not drop below the preset DRYBULB SET/ENTH CURVE settings in the SETPOINTS menu. (See Figure 12.)

- 3rd Stage Cooling (if available) closes and sends a signal to JADE™ control, which closes the Y2-O relay to begin 2nd stage mechanical cooling. The economizer damper REMAINS OPEN in tandem operation with the compressor as long as the temperature outside does not drop below the preset DRYBULB SET setting in the SETPOINTS menu. (See Figure 12.)

Condition — Warm / Humid OA Conditions

- 1st Stage Cooling closes and sends signal to JADE™ control. Since the OA conditions are above the preset DRYBULB SET/ENTH CURVE setting in the SETPOINTS menu, the control will simply close the Y1-O relay to initiate mechanical cooling. The economizer damper will remain closed or in a minimum ventilation setting depending upon occupied status. (See Figure 13.)

- 2nd Stage Cooling (if available) closes and sends a signal to JADE™ control. Since the OA conditions are still above than the preset DRYBULB SET/ENTH CURVE setting in the SETPOINTS menu, the control will simply close the Y2-O relay to initiate 2nd stage mechanical cooling. The economizer damper will remain closed or in a minimum ventilation setting depending upon occupied status. (See Figure 13.)
ECONOMIZER FEATURES

- One piece construction – easy to install. Direct-drive actuator eliminates linkage.
- Exhaust air damper – built in with positive closed position. Provides exhaust air capability to prevent pressurization of tight buildings.
- JADE™ controller provides nearly limitless customization on a solid, intuitive electronic platform.
- Actuator Motor – 24 volt, power-open, spring-return, direct-coupled with stall protection. Self-centering shaft clamp and access cover facilitate ease of replacement/maintenance.
- Proportioning-type control – for maximum “free” cooling economy and comfort with up to 75% outside air.
- Enthalpy sensor to monitor outdoor air temperature.
- Minimum Ventilation Position available for required ventilation of occupants or dilution of pollutants.
- Mixed air sensor to monitor outdoor and return air to automatically modulate damper position.
Economizer Operation for Single Stage:

1. **OA CONDITIONS ABOVE DRYBULB OR ENTHALPY CURVE SETPOINT**
   - MECHANICAL COOLING BEGINS, ECON. DAMPER CLOSED OR MIN. POSITION
   - CONDITIONED SPACE LOAD IS PICKED UP BY MECHANICAL COOLING
   - THERMOSTAT IS SATISFIED AND SYSTEM SHUTS DOWN

2. **OA CONDITIONS BELOW DRYBULB OR ENTHALPY CURVE SETPOINT**
   - ECONOMIZER ONLY OPERATION, MAT SENSOR ATTEMPTS TO MAINTAIN PRESET DISCHARGE AIR TEMP.
   - IS ADDITIONAL COOLING REQ'D?
     - NO
       - CONDITIONED SPACE LOAD IS PICKED UP BY ECONOMIZER
       - THERMOSTAT IS SATISFIED AND SYSTEM SHUTS DOWN
     - YES
       - MECHANICAL COOLING BEGINS, ECON DAMPER REMAINS OPEN
       - CONDITIONED SPACE LOAD IS PICKED UP BY ECONOMIZER AND MECHANICAL COOL
       - THERMOSTAT IS SATISFIED AND SYSTEM SHUTS DOWN
Economizer Operation for Two Stage:

1ST STAGE
MECHANICAL COOLING BEGINS, ECON. DAMPER CLOSED OR MIN. POSITION

IS ADDITIONAL COOLING REQ'D?

YES

2ND STAGE MECHANICAL COOLING BEGINS, ECON DAMPER CLOSED OR MIN. POSITION

CONDITIONED SPACE LOAD IS PICKED UP BY MECHANICAL COOLING

CONDITIONED SPACE LOAD IS PICKED UP BY ECONOMIZER

THERMOSTAT IS SATISFIED AND SYSTEM SHUTS DOWN

THERMOSTAT IS SATISFIED AND SYSTEM SHUTS DOWN

NO

CONDITONED SPACE LOAD IS PICKED UP BY MECHANICAL COOLING

THERMOSTAT IS SATISFIED AND SYSTEM SHUTS DOWN

THERMOSTAT IS SATISFIED AND SYSTEM SHUTS DOWN

IS ADDITIONAL COOLING REQ'D?

YES

NO

1ST STAGE MECHANICAL COOLING BEGINS, ECON DAMPER REMAINS OPEN

IS ADDITIONAL COOLING REQ'D?

NO

YES

2ND STAGE MECHANICAL COOLING BEGINS, ECON DAMPER REMAINS OPEN

CONDITIONED SPACE LOAD IS PICKED UP BY ECONOMIZER AND MECHANICAL COOL

CONDITIONED SPACE LOAD IS PICKED UP BY ECONOMIZER AND MECHANICAL COOL

THERMOSTAT IS SATISFIED AND SYSTEM SHUTS DOWN

THERMOSTAT IS SATISFIED AND SYSTEM SHUTS DOWN

THERMOSTAT IS SATISFIED AND SYSTEM SHUTS DOWN

THERMOSTAT IS SATISFIED AND SYSTEM SHUTS DOWN

OA CONDITIONS ABOVE DRYBULB OR ENTHALPY CURVE SETPOINT

OA CONDITIONS BELOW DRYBULB OR ENTHALPY CURVE SETPOINT

ECONOMIZER ONLY OPERATION, MAT SENSOR ATTEMPTS TO MAINTAIN PRESET DISCHARGE AIR TEMP.

IS ADDITIONAL COOLING REQ'D?
