ECONOMIZERS WITH EXHAUST
FOR STANDARD APPLICATIONS

Models:
ECONCHS-E3* & -E5*
(Factory-Installed Vent Option “S”) with ENTHALPY CONTROL

For Use with 2 Through 6 Ton Wall Mount Heat Pumps with TCURB

IMPORTANT
All ECONCHS-E*-* models must be installed with a TCURB.

NOTE: These instructions are written to cover field-installed economizers, but are also included with factory-installed economizers. For factory-installed economizers, all portions addressing “installation” are for reference only.
ECONOMIZER FEATURES

- One piece construction—easy to install. Direct-drive actuator eliminates linkage.
- Exhaust air damper—built in with positive closed position. Provides exhaust air capability to prevent pressurization of tight buildings.
- **JADE™** controller provides nearly limitless customization on a solid, intuitive electronic platform.
- Actuator Motor – 24 volt, power-open, spring-return, direct-coupled with stall protection. Self-centering shaft clamp and access cover facilitate ease of replacement/maintenance.
- Proportioning-type control for maximum “free” cooling economy and comfort with up to 75% outside air.
- Enthalpy sensor to monitor outdoor air temperature.
- Minimum Ventilation Position available for required ventilation of occupants or dilution of pollutants.
- Mixed air sensor to monitor outdoor and return air to automatically modulate damper position.
GENERAL INFORMATION

The economizer should only be installed by a trained heating and air conditioning technician. These instructions serve as a guide to the technician installing an economizer package, not as a step-by-step procedure with which the mechanically inclined owner can install the package.

The economizer housing is shipped in one carton, which contains the electrical harness, miscellaneous hardware and installation instructions.

The economizer installation requires the use of a 2-stage or 3-stage cooling thermostat (if there is not one already present) and requisite amounts of low voltage conductor wire for the application. A single stage compressor will require a 2-stage cooling thermostat; a 2-stage compressor will require a 3-stage cooling thermostat. The number of low-voltage control conductors will vary depending upon application.

Any wall mount unit equipped with an economizer must also have a factory/field installed low ambient control. Please refer to appropriate model/year Specification Sheet for requisite field installed low ambient control kit part numbers.

UNPACKING

Upon receipt of the equipment, be sure to compare the model number found on the shipping label with the accessory identification information on the orders and shipping document to verify that the correct accessory has been shipped.

Inspect the carton housing of each economizer assembly as it is received, and before signing the freight bill – verify that all items have been received and there is no visible damage. Note any shortages or damage on all copies of the freight bill. The receiving party must contact the last carrier immediately, preferably in writing, requesting inspection by the carrier's agent. Concealed damage not discovered until after loading must be reported to the carrier within 15 days of its receipt.

NOTE: Factory installed Telcom economizers have the air intake hood shipped knocked-down. See “Intake Air Hood Assembly” section for shipping location of hood parts and follow the assembly instructions.

DESCRIPTION

The ECONCHS-E*-X economizer is designed to be used with wall mount series heat pumps, shown in Table 1, equipped with low ambient controls. They are electromechanical economizer systems designed to provide “free” cooling where the outdoor air temperature/enthalpy is cool enough to provide the needed cooling without running the compressor, or in addition to the compressor. When cooling is required, the system automatically takes advantage of cold outdoor air when available and uses it for first stage cooling. This then reduces the need to run the air conditioning compressor providing lower operating costs and increasing the service life of the equipment. If the outdoor air temperature/enthalpy is too warm to be sufficient for cooling, the enthalpy sensor detects the condition and automatically closes the outdoor air intake/exhaust damper, opens the return air damper, and switches to compressor-only operation. Without attention from the end user, the economizer assembly is meant to automatically achieve maximum savings while ensuring appropriately cool space temperatures. The economizer utilizes a fully-modulating damper actuator, which will control intake/exhaust in order to obtain and maintain a factory-set minimum supply air temperature. As a secondary feature, the economizer assembly can be programmed for a minimum ventilation based on an “occupied” (or otherwise dedicated) 24V signal to satisfy fresh air ventilation on populated structures or dilution of internal pollutants.

© Low ambient control is required with economizer for low temperature operation.
INSTALLATION OF FIELD-INSTALLED ECONOMIZER

BASIC INSTALLATION OF ECONCHS-E5-*

1. Unpack the economizer assembly, which includes the integral economizer with attached electrical harness, mixed air sensor, body panels, miscellaneous hardware and installation instructions.

2. From existing wall mount unit, remove and save blower access panel and filter access panel. Remove and discard the ventilation option panel. Remove and save the existing filter. Remove the return air flange from the back of the unit (see Figure 1). Remove and discard the exhaust cover plate from the lower partition of the TCURB (see Figure 4).

3. In the open cavity between the filter rack and the condenser section, begin to insert the main economizer assembly. Slide the assembly inside, being careful not to tear the existing insulation. Do not completely recess the assembly (see Figure 2).

4. Unravel the attached economizer wiring harness and separate the two (2) orange wires connected to a white, two-pin sensor plug. The remainder of the low voltage wires can be routed through the existing wiring grommet located near the bottom of the wall mount electrical control panel (see Figure 2).

WARNING

Electrical shock hazard.
Disconnect remote electrical power supply or supplies before servicing.
Failure to do so could result in electric shock or death.
5. Pull wires gently through grommet so that low voltage wires protrude underneath wall mount terminal board.

6. Route two (2) orange wires connected to a white two-pin sensor plug along refrigerant lines and behind the filter bracket to terminate at the blower partition (see Figure 2).

7. Fully seat economizer assembly to the rear of the wall mount cavity, making sure economizer control panel opposite filler strip is fully recessed into cabinet (see Figure 2).

8. Untape the back blade assembly and pivot it down into the TCURB. Push the locking brackets down on each side to lock in place (see Figure 6).

9. Attach the rear linkage assembly to the front blade with two (2) screws provided.

10. Install temperature sensor bracket and mixed air temperature sensor in blower partition. Insert white two-pin sensor into sensor housing (see Figure 3).

11. Re-install blower access panel and filter access panel.

12. Connect all low voltage leads to terminal board of wall mount unit as required according to installed equipment and controls. Figure 4 shows the basic economizer wiring and is followed by typical control wiring diagrams for single unit applications.

MIS-2933 B
BASIC INSTALLATION of ECONCHS-E3-*

1. Unpack the economizer assembly, which includes the integral economizer with attached electrical harness, mixed air sensor, body panels, miscellaneous hardware and installation instructions.

![WARNING]

Electrical shock hazard.
Disconnect remote electrical power supply or supplies before servicing.
Failure to do so could result in electric shock or death.

2. From existing wall mount unit, remove and save blower access panel and filter access panel. Remove and discard the ventilation option panel. Remove and save the existing filter (see Figure 4).

3. Remove and discard the return air flange from the back of the unit and trim the insulation to the new opening.

4. Remove and discard the exhaust cover plate located on the lower partition of the TCURB.

5. Attach back return fill to the rear of the economizer (see Figure 6). Remove the right and left filter brackets (see Figure 5).

6. In the open cavity between the filter rack and the condenser section, begin to insert the main economizer assembly. Slide the assembly inside, being careful not to tear the existing insulation. Do not completely recess the assembly (see Figure 2).

7. Unravel the attached economizer wiring harness and separate the two (2) orange wires connected to a white, two-pin sensor plug. The remainder of the low voltage wires can be routed through the existing wiring grommet located near the bottom of the wall mount electrical control panel (see Figure 2).

FIGURE 5
8. Pull wires gently through grommet so that low voltage wires protrude underneath wall mount terminal board.

9. Route two (2) orange wires connected to a white two-pin sensor plug along refrigerant lines and behind the filter bracket to terminate at the blower partition (see Figure 7).

10. Fully seat economizer assembly to the rear of the wall mount cavity, making sure economizer control panel opposite filler strip is fully recessed into cabinet (see Figure 8).

11. Untape the back blade assembly and pivot it down into the TCURB. Push the locking brackets down on each side to lock in place (see Figure 6.)

12. Attach the rear linkage assembly to the front blade with two (2) screws provided.

13. Reinstall the filter brackets in the unit with the bottom or the brackets level with the sides of the economizer.

14. Install temperature sensor bracket and mixed air temperature sensor in blower partition. Insert white two-pin sensor into sensor housing (see Figure 8).

15. Reinstall blower access panel and filter access panel.

16. Connect all low voltage leads to terminal board of wall mount unit as required according to installed equipment and controls. Figure 6 shows the basic economizer wiring and is followed by typical control wiring diagrams for single unit applications.

**NOTE:** Since observation of motor/damper operation is difficult after air hood installation, it is recommended the unit be enabled for start-up now. If high voltage power is available and the wall mount unit can be energized, turn to Page 16 for programming and start-up/checkout procedures. If no power is available, or if immediate start-up is not desired, continue with the basic installation process. The air hood assembly can be partially disassembled at a later time for start-up/checkout procedures.

WITH ECONCH* STYLE ECONOMIZER

Low Voltage Wiring Diagram

Thermostat part #8403-060

24V Low Voltage Terminal Block

Must be energized to enable minimum position. NOTE: Economizer Control Default Setting is 2.0V (100%). Depending upon application may require setting to lower value.

2 Must be configured for heat pump and economizer to enable YO/D output to be active as 1st-stage cooling

3 Factory Jumper Installed.

MIS-3696
**INTAKE AIR HOOD ASSEMBLY**

The standard version economizers utilize an air intake hood to maximize outdoor airflow performance and to be able to introduce this at low intake velocity.

**Factory-Installed Economizers**

The main economizer assembly is installed in the unit’s ventilation cavity, but the air intake hood is shipped on the back side of the Heat Pump unit.

**Field-Installed Economizers**

1. Install the WMDK2-* (purchased separately) in place where discarded vent option panel used to be (see page 4).
2. Attach this hood to the service access panel with screws provided (see Figure 10).

---

**FIGURE 10**
JADE™ ECONOMIZER CONTROLLER

W7220 controller offers unparalleled flexibility and expansion in a dependable and solid electronic platform.

- Multiple economizer applications from one controller.
- Nearly limitless customization of setpoints.
- Internal checkout menu provides fast performance assessment.
- Alarms menu provides assistance in troubleshooting.

Memory: User-defined setpoints remain in non-volatile flash memory regardless of electrical outage duration. Control voltage below 18V may cause erratic performance.

START-UP/CHECKOUT PROCEDURES

There are six (6) basic MENU categories to navigate:

1. SYSTEM SETUP – customizable application programming (see Review/Customize System Setup).
2. ADVANCED SETUP – further application and operational options.
3. SETPOINTS – customizable operational parameters.
4. CHECKOUT – instantly activate and verify economizer functions.
5. STATUS – provides real-time access to sensor input, damper and equipment operation.
6. ALARMS – displays alarms and pinpoints problem areas.

Review/Customize System Setup

Before being placed in service, the JADE™ economizer controller programming should be reviewed/customized through the following steps:

1. SYSTEM SETUP: from the main screen, press the SCROLL (UP/DOWN) BUTTONS to navigate through the six (6) basic menu items to the SYSTEM SETUP menu.
   - Push the SELECT (ENTER) BUTTON to choose the SYSTEM SETUP menu.
   - Navigate through the multiple levels of SYSTEM SETUP by pushing the SCROLL (UP/DOWN) BUTTONS.
   - To change a specific parameter in the SYSTEM SETUP menu, press the SELECT (ENTER) BUTTON to display its current value. Press the SCROLL (UP/DOWN) BUTTONS to change or increase/decrease value. Press the SELECT (ENTER) BUTTON to save the new customized value—"CHANGE STORED" will be displayed. Press the SELECT (ENTER) BUTTON again to return to current menu parameter.
   - For specific SYSTEM SETUP level information, refer to Table 2.

NOTE: During an extended level of inactivity, the display of the JADE™ economizer controller will begin to automatically scroll through the various levels of the STATUS menu as a screen saver. Each level will stay for approximately 5 seconds before changing to the next level.

From the factory, the JADE™ economizer controller has been preset with “default” values that were predetermined as optimum for equipment buildings, and these are shown in Tables 2 – 7. However, it is important to review and/or customize these operational values per owner specifications in order to guarantee satisfactory performance. The installing contractor can easily access the JADE™ programming by the integral keypad and LCD display.

* In SYS SETUP, the correct Equipment setting is HP and for the AUX2 IN is HP (B) in all applications. This is correct for both air conditioner and heat pump equipment in order to have correct operating sequences for the economizers. DO NOT change to CONV = A/C setting just because the equipment is an air conditioner and not a heat pump.

</tbody>
</table>

**NOTE:** Economizer assembly should be ready to put into service. At any point during operation, in economizer mode or idle, real-time information from sensors and integral components can be accessed from the STATUS menu.

5. **STATUS:** from the main screen, press the SCROLL (UP/DOWN) BUTTONS to navigate through the six (6) basic menu items to the STATUS menu.

   - Push the SELECT (ENTER) BUTTON to choose the STATUS menu.
   - Navigate through the multiple levels of STATUS by pushing the SCROLL (UP/DOWN) BUTTONS.
   - As the STATUS menu simply gives input/output information in real-time, there is no way to change or otherwise alter the displayed criteria. It is simply a window into the operation of the economizer controller.
   - For specific STATUS level information, refer to Table 6.

**NOTE:** Upon power-up (or after power failure or low voltage condition), the controller will begin a 5-minute time delay before enabling mechanical cooling.

**MINIMUM POSITION NOTE:** Minimum position setting has been preset to 10V which when connected to MC4001 Lead/Lag Controller System will allow economizer to drive wide open per emergency ventilation strategy as detailed in MC4001 Instructions. This may require resetting to a lower value per job specifications.

NOTE: If there are any potential problems recognized by the economizer controller, it may be registered in the form of an alarm in the ALARM(S) menu. If there is a period of inactivity AND there is an alarm registering, the controller will randomly scroll through the ALARM(S) menu items as a screensaver.

ALARM(S): from the main screen, press the SCROLL (UP/DOWN) BUTTONS to navigate through the six (6) basic menu items to the ALARM(S) menu.
- Push the SELECT (ENTER) BUTTON to choose the ALARM(S) menu.
- Navigate through the current alarms in ALARM(S) by pushing the SCROLL (UP/DOWN) BUTTONS.
- Once the alarm has been identified, and the cause has been removed (e.g., replaced faulty sensor), the alarm may erase itself. If a manual alarm-erasing is required, it can be cleared from the display by navigating to the desired alarm and pressing the SELECT (ENTER) BUTTON to choose that specific alarm. “ERASE?” will display. Press the SELECT (ENTER) BUTTON again. “ALARM ERASED” will appear. Press the MENU UP (EXIT) BUTTON to complete the action and return to the previous menu.
- For specific ALARM(S) information, refer to Table 7.

ENTHALPY SETTINGS

If economizer is enthalpy-based, and was shipped with the temp/humidity sensor, the economizer must be programmed for the specific enthalpy curve boundary desired for “free” outdoor cooling. The available enthalpy boundaries are all subject to specific OA temperature, OA humidity and OA dew points. If all of the OA conditions are below the specific points outlined in each boundary, the conditions are good to economize and economizer mode is set to “YES”. If some or all the OA conditions are above the specific points outlined in each boundary, the conditions are not good to economize and the economizer mode is set to “NO”.

</table>
ECONOMIZER SEQUENCE OF OPERATION

Condition – Cool/Dry OA Conditions

1st Stage Cooling closes and sends signal to JADE™ control. Since the air temperature outside is cooler than the preset DRYBULB SET setting, or is below the ENTH CURVE boundary in the SETPOINTS menu, the actuator will power the economizer damper to “economizer” mode as the indoor blower motor starts. The mixed air sensor senses a mixture of return air and cool outdoor air and modulates opening to achieve preset MAT SET setting in SETPOINTS menu. Compressor operation is inhibited (see Figure 12).

2nd Stage Cooling closes and sends a signal to JADE™ control, which closes the Y1-O relay to begin mechanical cooling. The economizer damper REMAINS OPEN in tandem operation with the compressor as long as the OA conditions do not drop below the preset DRYBULB SET/ENTH CURVE settings in the SETPOINTS menu (see Figure 13).

3rd Stage Cooling (if available) closes and sends a signal to JADE™ control, which closes the Y2-O relay to begin 2nd stage mechanical cooling. The economizer damper REMAINS OPEN in tandem operation with the compressor as long as the temperature outside does not drop below the preset DRYBULB SET setting in the SETPOINTS menu (see Figure 13).

Condition – Warm/Humid OA Conditions

1st Stage Cooling closes and sends signal to JADE™ control. Since the OA conditions are above the preset DRYBULB SET/ENTH CURVE setting in the SETPOINTS menu, the control will simply close the Y1-O relay to initiate mechanical cooling. The economizer damper will remain closed or in a minimum ventilation setting depending upon occupied status (see Figure 14 on page 18).

2nd Stage Cooling (if available) closes and sends a signal to JADE™ control. Since the OA conditions are still above the preset DRYBULB SET/ENTH CURVE setting in the SETPOINTS menu, the control will simply close the Y2-O relay to initiate 2nd stage mechanical cooling. The economizer damper will remain closed or in a minimum ventilation setting depending upon occupied status (see Figure 14).
FIGURE 14
100% Closed Loop Airflow Path
Economizer Operation for Single Stage:

1. **OA CONDITIONS ABOVE DRYBULB OR ENTHALPY CURVE SETPOINTS**
   - MECHANICAL COOLING BEGINS, ECON. DAMPER CLOSED OR MIN. POSITION
   - CONDITIONED SPACE LOAD IS PICKED UP BY MECHANICAL COOLING
   - THERMOSTAT IS SATISFIED AND SYSTEM SHUTS DOWN

2. **OA CONDITIONS BELOW DRYBULB OR ENTHALPY CURVE SETPOINT**
   - ECONOMIZER ONLY OPERATION, MAT SENSOR ATTEMPTS TO MAINTAIN PRESET DISCHARGE AIR TEMP.
   - IS ADDITIONAL COOLING REQ’D?
     - NO
       - CONDITIONED SPACE LOAD IS PICKED UP BY ECONOMIZER
       - THERMOSTAT IS SATISFIED AND SYSTEM SHUTS DOWN
     - YES
       - MECHANICAL COOLING BEGINS, ECON DAMPER REMAINS OPEN
       - CONDITIONED SPACE LOAD IS PICKED UP BY ECONOMIZER AND MECHANICAL COOL
       - THERMOSTAT IS SATISFIED AND SYSTEM SHUTS DOWN
Economizer Operation for Two Stage:

1. **THERMOSTAT/CONTROL CALLS FOR 1st STAGE COOLING**
   - OA CONDITIONS ABOVE DRYBULB OR ENTHALPY CURVE SETPOINT
   - 1st STAGE MECHANICAL COOLING BEGINS, ECON. DAMPER CLOSED OR MIN. POSITION
   - IS ADDITIONAL COOLING REQ’D?
     - YES
       - CONDITIONED SPACE LOAD IS PICKED UP BY MECHANICAL COOLING
       - CONDITIONED SPACE LOAD IS PICKED UP BY ECONOMIZER
       - THERMOSTAT IS SATISFIED AND SYSTEM SHUTS DOWN
       - THERMOSTAT IS SATISFIED AND SYSTEM SHUTS DOWN
     - NO
       - 2nd STAGE MECHANICAL COOLING BEGINS, ECON DAMPER CLOSED OR MIN. POSITION
       - CONDITIONED SPACE LOAD IS PICKED UP BY MECHANICAL COOLING
       - CONDITIONED SPACE LOAD IS PICKED UP BY ECONOMIZER AND MECHANICAL COOL
   - NO
     - ECONOMIZER ONLY OPERATION, MAT SENSOR ATTEMPTS TO MAINTAIN PRESET DISCHARGE AIR TEMP.
     - IS ADDITIONAL COOLING REQ’D?
       - YES
         - 1st STAGE MECHANICAL COOLING BEGINS, ECON DAMPER REMAINS OPEN
         - CONDITIONED SPACE LOAD IS PICKED UP BY ECONOMIZER AND MECHANICAL COOL
         - THERMOSTAT IS SATISFIED AND SYSTEM SHUTS DOWN
       - NO
         - 2nd STAGE MECHANICAL COOLING BEGINS, ECON DAMPER REMAINS OPEN
         - CONDITIONED SPACE LOAD IS PICKED UP BY ECONOMIZER AND MECHANICAL COOL
     - NO
       - CONDITIONED SPACE LOAD IS PICKED UP BY ECONOMIZER
       - THERMOSTAT IS SATISFIED AND SYSTEM SHUTS DOWN
       - THERMOSTAT IS SATISFIED AND SYSTEM SHUTS DOWN

2. OA CONDITIONS BELOW DRYBULB OR ENTHALPY CURVE SETPOINT
   - ECONOMIZER ONLY OPERATION, MAT SENSOR ATTEMPTS TO MAINTAIN PRESET DISCHARGE AIR TEMP.
   - IS ADDITIONAL COOLING REQ’D?
     - YES
       - 1st STAGE MECHANICAL COOLING BEGINS, ECON DAMPER REMAINS OPEN
       - CONDITIONED SPACE LOAD IS PICKED UP BY ECONOMIZER AND MECHANICAL COOL
       - THERMOSTAT IS SATISFIED AND SYSTEM SHUTS DOWN
     - NO
       - CONDITIONED SPACE LOAD IS PICKED UP BY ECONOMIZER
       - THERMOSTAT IS SATISFIED AND SYSTEM SHUTS DOWN
       - THERMOSTAT IS SATISFIED AND SYSTEM SHUTS DOWN
